

iNOBLE

iNoble mini-stereo cables are built to compensate for the sonic loss that inherently comes from today's digital devices. After many prototypes and rigorous testing, we discovered just the right recipe for a slightly "brighter" cable. The crisp highs that go unrepresented in digital formats such as mp3, aac, and mp4 shine through, and a robust low end is maintained to provide punchy and thunderous bass. These are the perfect compliment to your iPod, Zune, or other mp3 player.

As with all of our cables, the iNobles are built to exacting standards with quality of sound and build integrity being paramount. They are exceptionally flexible yet rugged, and will provide years of digital sound enhancement for a fraction of the price of many other 3.5mm tipped cables.

- Slightly peaked frequency characteristic at low end of sound spectrum and steady through high end for maximum listening experience
- 40 separate pure copper strands in each of the 4 internal conductors eliminate breakage due to flexing.
- Rugged 3.5mm connectors built to endure mobile punishment
- Star Quad configuration eliminates handling noise and rejects EMI and RFI.

- Conductor: 21 AWG, 40 strand (x4) Copper conductors for flexibility and expanded frequency response.
- Special cross-linked PE insulation
- Flexible in extreme cold weather for potential automotive use.
- Shield: >95% Copper High-density TAC Braid.
- Conductor DC Resistance: <29.9 ohms/1000 ft.
- Shield DC Resistance: <9.1 ohms/1000 ft.
- Nominal Capacitance: 46.0 pF/ft
- Nominal Impedance: 44-ohm.
